

Superstone Radiators

The art of heating...

A new style in living —

Superstone Radiators offer a unique approach to heating your home, combining energy-efficient design with classical artwork. Now you can display your radiator as a work of art – something to be proud of, not hidden behind the sofa or enclosed in a cover.

Each radiator design has been produced by renowned Welsh sculptor Robert Conbear, whose work and collections have been exhibited nationwide. Swansea-based Robert is renowned overseas in America and all over the art world for his unique talents.

Enhance your home —

Create an attractive centrepiece in your home or office with a timeless design that will be the envy of any lounge, kitchen, dining room or bathroom. Not only do they present a stylish talking point in your home, Superstone Radiators can improve your energy efficiency – a green way to save money.

Superior design —

Like a warm stone on a sunny day, Superstone Radiators release a gentle, comfortable heat. They bring together breakthrough technology and traditional stone heating methods to achieve a high level of efficiency and low running cost.

The innovative design is less likely to block with sediment than other radiators and does not need bleeding. All radiators heat to running temperature quickly and on demand, and then retain heat like a night storage radiator. Using advanced formula, flexible materials, they work well with many types of hot water heating systems.

About Superstone Radiators —

Stone has been used for heating in different forms for thousands of years. Superstone Radiators harness the thermal properties of this natural material and the power of modern technology to bring you a beautiful home feature with a low carbon footprint and superior efficiency.

Since 1984, Superstone's parent company Superseal Ltd has been involved in specialist concrete mouldings and the formulation of glass-reinforced polymer concretes (GRCs). Their research and development recently led to a technical breakthrough that meant GRC radiators could be combined with moulded artwork to create these attractive wall-mounted designs. With a wealth of experience and knowledge in the field, Superstone Radiators can assure you of quality materials and exceptional craftsmanship.

Tailored to your taste —

Superstone Radiators are available in Portland White for you to decorate according to the colour scheme in your home or to display as a stand-alone piece. Complement your décor with a palette to suit you, and enjoy the creativity of self-expression.

The Sunflowers

Van Gogh's famous masterpiece is the classic choice for any prestige home or office interior – it is an iconic work that is instantly recognisable. The artist painted his subject in several hues, so you can enjoy a wide scope in colour coordination. The artwork also looks impressive in Portland White, with creative lighting to depict its features as a standalone sculpture.

Egyptian masterpiece

Chosen because of its fame and long-standing historical significance, this relief sculpture of the opulent King Tutankhamen's tomb is a truly timeless piece. The Egyptians were known for their highly decorative paintings, so with a little research you can let your imagination flow and create the colour palette of your choice. Available in Portland White.
